

DISC.01US01

AMENDMENTS TO THE CLAIMS

The present listing of claims replaces all prior versions and listings of claims in the subject patent application.

Claim 1 (currently amended): A speech to text conversion system for converting voice information to text information for a specified user associated with a Caller ID comprising:

- a telephony device that transmits said voice information;
- a telephone network that receives said voice information from said telephony device and transmits said voice information and said Caller ID to said communications server;
- a communications server that receives said voice information and said Caller ID;
- an account disposed in said communications server that is accessed by and linked to said Caller ID, said account including routing information that routes text information to a specified destination and having a speech recognition system configured specifically for said user that converts said voice information to said text information; and
- a router disposed in said communications server that automatically transmits said text information to said specified destination.

Claim 2 (original): The speech to text conversion system of claim 1 wherein said communications server further comprises a storage device that stores said voice information.

Claim 3 (original): The speech to text conversion system of claim 1 wherein said communications server further comprises a storage device that stores said text information.

Claim 4 (original): The speech to text conversion system of claim 1 wherein said Caller ID is an Automatic Number Identifier.

DISC.01US01

Claim 5 (original): The speech to text conversion system of claim 1 wherein said Caller ID is a Calling Party Number.

Claim 6 (original): The speech to text conversion system of claim 1 wherein said Caller ID is a Calling Number Delivery.

Claim 7 (original): The speech to text conversion system of claim 1 wherein said Caller ID is a Calling Name and Number Delivery.

Claim 8 (original): The speech to text conversion system of claim 1 wherein said Caller ID is a Caller Line Identification.

Claim 9 (original): The speech to text conversion system of claim 1 wherein said Caller ID is a Calling Party Number Message.

Claim 10 (original): The speech to text conversion system of claim 1 wherein said Caller ID is an Electronic Serial Number from a wireless telephony device.

Claim 11 (currently amended): The speech to text conversion system of claim 1 wherein said Caller ID is information stored within a Subscriber Identification Module which ~~may be~~ is installed in a wireless telephony device.

Claim 12 (currently amended): The speech to text conversion system of claim 1 wherein said Caller ID is information stored within a Universal Subscriber Identify Module which ~~may be~~ is installed in a wireless telephony device.

Claim 13 (currently amended): The speech to text conversion system of claim 1 wherein said Caller ID is information stored within a Universal Subscriber Identify Module Integrated Circuit Card which ~~may be~~ is installed in a wireless telephony device.

DISC.01US01

Claim 14 (original): The speech to text conversion system of claim 1 wherein said text information is encrypted prior to being transmitted to said specified destination.

Claim 15 (original): The speech to text conversion system of claim 1 wherein said specified destination is text capable device addressable by an email address.

Claim 16 (original): The speech to text conversion system of claim 1 wherein said specified destination is a text capable mobile telephone.

Claim 17 (original): The speech to text conversion system of claim 1 wherein said specified destination is an Instant Message Account addressable through an Instant Message Service with an account ID.

Claim 18 (original): The speech to text conversion system of claim 1 wherein said specified destination is a text capable pager.

Claim 19 (original): The speech to text conversion system of claim 1 wherein said specified destination is a wireless email device.

Claim 20 (original): The speech to text conversion system of claim 1 wherein said specified destination is a text capable device addressable by an Internet Protocol Address.

Claim 21 (original): The speech to text conversion system of claim 1 wherein said specified destination is a text capable device addressable by an Internet Protocol Address obtained from a query to a Domain Name Service

Claim 22 (original): The speech to text conversion system of claim 1 wherein said specified destination comprises a text capable device addressable by an Internet Protocol Address and a transport layer port number.

DISC.01US01

Claim 23 (original): The speech to text conversion system of claim 1 wherein said specified destination is a text capable device addressable by a Uniform Resource Identifier.

Claim 24 (original): The speech to text conversion system of claim 1 wherein said specified destination is a text capable device addressable by a Uniform Resource Locator.

Claim 25 (original): The speech to text conversion system of claim 1 wherein said specified destination is a text capable device addressable by a Uniform Resource Name.

Claim 26 (original): The speech to text conversion system of claim 1 wherein said specified destination is a fax machine.

Claim 27 (original): The speech to text conversion system of claim 1 wherein said telephony device is a wireless telephony device.

Claim 28 (original): The speech to text conversion system of claim 1 wherein said telephony device is a wireline telephony device.

Claim 29 (currently amended): A speech to text conversion system for converting voice information to text information for a specified user associated with Caller ID comprising:

- means for generating voice information;
- means for generating said Caller ID;
- communications server means for receiving said voice information and said Caller ID;
- means for accessing an account disposed in said communications server
- means based on said Caller ID;

DISC.01US01

means for directing text information to a specified destination based on destination information accessed in said account;

means for converting said voice information to said text information that is configured specifically for said user that is accessed using said information stored in said account; and

means for transmitting said text information to said specified destination automatically.

Claim 30 (original): The speech to text conversion system of claim 29 further comprising telephone network means for receiving said voice information from said means for generating voice information.

Claim 31 (original): The telephone network means of claim 30 further comprising means for transmitting said voice information and said Caller ID to said communications server.

Claim 32 (original): The speech to text conversion system of claim 29 wherein said communications server means further comprises means for storing said voice information.

Claim 33 (original): The speech to text conversion system of claim 29 wherein said communications server means further comprises means for storing said text information.

Claim 34 (currently amended): A method for converting voice information to text information for a specified user associated with a Caller ID comprising:

transmitting voice information with a telephony device;
receiving said voice information in a telephone network from said telephony device;
transmitting said voice information and said Caller ID from said telephone network;

DISC.01US01

receiving said voice information and said Caller ID using a communications server;

accessing an account disposed in said communications server using said Caller ID;

converting said voice information to said text information using a speech recognition system that is configured specifically for said specified user; routing said text information to a specified destination from routing information stored in said account; and

transmitting said text information from said communications server to said specified destination automatically.

Claim 35 (original): The method of claim 34 further comprising storing said voice information at said communications server.

Claim 36 (original): The method of claim 34 further comprising storing said text information at said communications server.

Claim 37 (original): The method of claim 34 further comprising encrypting said text information prior to transmitting said text information from said communications server to said specified destination.

Claim 38 (original): The method of claim 34 wherein the step of routing said text information comprises routing said text information to a text capable device addressable by an email address.

Claim 39 (original): The method of claim 34 wherein the step of routing said text information comprises routing said text information to a text capable mobile telephone.

DISC.01US01

Claim 40 (original): The method of claim 34 wherein the step of routing said text information comprises routing said text information to an Instant Message Account addressable through an Instant Message Service with an account ID.

Claim 41 (original): The method of claim 34 wherein the step of routing said text information comprises routing said text information to a text capable pager.

Claim 42 (original): The method of claim 34 wherein the step of routing said text information comprises routing said text information to a wireless email device.

Claim 43 (original): The method of claim 34 wherein the step of routing said text information comprises routing said text information to a text capable device addressable by an Internet Protocol Address.

Claim 44 (original): The method of claim 34 wherein the step of routing said text information comprises routing said text information to a text capable device addressable by an Internet Protocol Address obtained from a query to a Domain Name Service

Claim 45 (original): The method of claim 34 wherein the step of routing said text information comprises routing said text information to a text capable device addressable by an Internet Protocol Address and a transport layer port number.

Claim 46 (original): The method of claim 34 wherein the step of routing said text information comprises routing said text information to a text capable device addressable by a text capable device addressable by a Uniform Resource Identifier.

Claim 47 (original): The method of claim 34 wherein the step of routing said text information comprises routing said text information to a text capable device addressable by a Uniform Resource Locator.

DISC.01US01

Claim 48 (original): The method of claim 34 wherein the step of routing said text information comprises routing said text information to a text capable device addressable by a Uniform Resource Name.

Claim 49 (original): The method of claim 34 wherein the step of routing said text information comprises routing said text information to a fax machine.

Claim 50 (original): The method of claim 34 wherein the step of routing said text information comprises routing said text information to a wireless telephony device.

Claim 51 (original): The method of claim 34 wherein the step of routing said text information comprises routing said text information to a wireline telephony device.

Claim 52 (original): The method of claim 34 further comprising the step of providing said Caller ID by using an Automatic Number Identifier.

Claim 53 (original): The method of claim 34 further comprising the step of providing said Caller ID by using a Calling Party Number.

Claim 54 (original): The method of claim 34 further comprising the step of providing said Caller ID by using a Calling Number Delivery.

Claim 55 (original): The method of claim 34 further comprising the step of providing said Caller ID by using a Calling Name and Number Delivery.

Claim 56 (original): The method of claim 34 further comprising the step of providing said Caller ID by using a Caller Line Identification.

Claim 57 (original): The method of claim 34 further comprising the step of providing said Caller ID by using a Party Number Message.

DISC.01US01

Claim 58 (original): The method of claim 34 further comprising the step of providing said Caller ID by using an Electronic Serial Number from a wireless telephony device.

Claim 59 (currently amended): The method of claim 34 further comprising the step of providing said Caller ID by using information stored within a Subscriber Identification Module which ~~may be~~ is installed in a wireless telephony device.

Claim 60 (currently amended): The method of claim 34 further comprising the step of providing said Caller ID by using information stored within a Universal Subscriber Identify Module which ~~may be~~ is installed in a wireless telephony device.

Claim 61 (currently amended): The method of claim 34 further comprising the step of providing said Caller ID by using information stored within a Universal Subscriber Identify Module Integrated Circuit Card which ~~may be~~ is installed in a wireless telephony device.
